

HOT FPA TECHNOLOGY FOR SWAP+C-OPTIMIZED MWIR CAMERA CORE

FLIR Neutrino™ LC

FLIR uncooled LWIR camera cores are synonymous with size, weight, and power + cost (SWaP+C) solutions. The new FLIR Neutrino™ LC is the SWaP+C optimized solution for mid-wave infrared (MWIR) camera cores. Designed as an integral system from the ground up, the Neutrino LC is based on the new FLIR High Operating Temperature (HOT) focal plane array (FPA) technology, is cooled by a new FLIR linear micro-cooler, and uses FLIR Boson™ image-processing electronics. Faster time to image and longer cooler lifetime are key advantages of the Neutrino LC.

Neutrino LC meets the targeted needs of commercial and military markets, specifically the security, EVS, soldier dismount, and UAV verticals. With FLIR product and technical support, OEMs can reduce product development risk and shorten time to market.
